Summary

All of this remains a work in progress. The concept of micro-credentials is still in its early stages, having emerged only in the past 2–3 years. It serves as a powerful tool to promote lifelong learning and inclusive education, while also expanding opportunities for both higher education institutions and students. A step-by-step approach is the most effective way to implement and refine micro-credentials, ensuring their long-term success and impact.

We know where we are going, and we are on our way.

Thank You
